

[Clemente Spampinato](#)

Image:

Man has used bronze to fashion his tools, weapons and artifacts for thousands of years. Harder than copper (its prime ingredient), it is so fusible that it was used for armaments as early as 3000 BC. It was a substitution for quantity not for quality; iron was simply more readily available than bronze. And bronze continued through the ages as the preferred metal for durable coins, bells, and some of man's greatest works of art.
